

» Pistol grip CNG fueling nozzle for cars TK17 CNG for self-service operation

» PISTOL GRIP

for easier refueling

- » Easy, **single handed** operation
- » Super **light** → only 3.5 lbs
- » Swivel joint **360°**
- » Extremely **high flow** rate
→ short filling times
- » **Recirculation** of vented gas
- » **Coding** for pressure range and gas type
- » Optionally available with **inter-**
face for data transfer vehicle /
fueling station

Fast filling of cars

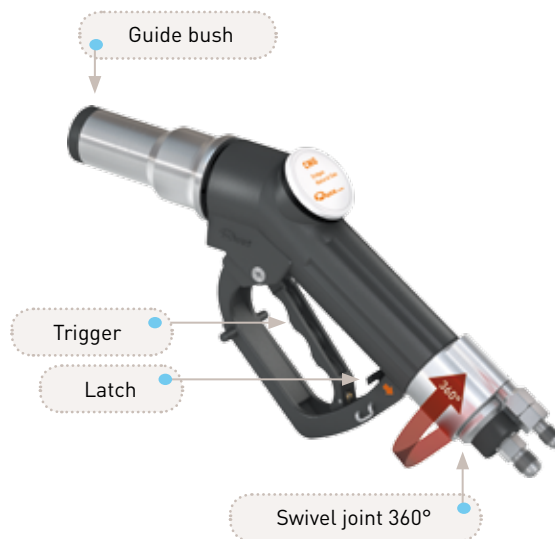

Safe and easy operation

Fueling Nozzle TK17 CNG

TK17 CNG

CNG fueling nozzle for cars

» PISTOL GRIP for easier refueling - TK17 CNG

In an important step towards greater consumer acceptance, the WEH TK17 CNG fueling nozzle for NGVs has been designed in a pistol grip style familiar to all conventional vehicle drivers. Having a similar look and feel, as well as single-handed operation, the nozzle is just as quick and easy to use as the common gasoline/diesel nozzle. A full 360° rotation allows for a convenient connection to the vehicle's fuel receptacle.

The same outstanding design characteristics of all other WEH nozzles are retained, including – CE marking (European Directive PED 97/23/CE), integrated

swivel joint, pressure rating 3000 /3600 psi (acc. to ISO 14469-1), gas and pressure coding, high flow rate and gas venting. In addition the new nozzle is compatible with any NGV1 profile connection and has a magnetic grip sensor for activation of the dispenser. The single-handed operation of this fueling nozzle will enhance the widespread acceptance of natural gas refueling.

Safety

The TK17 CNG offers high safety standards to its operator. The fueling nozzle will remain securely connected to the receptacle until the gas contained between the inlet valve and the receptacle is depressurized.

Application

CNG fast filling of cars at self-serve fueling stations. Use WEH TN1 CNG receptacle in order to achieve the most robust performance.
